I'm starting the 7-Day DevOps challenge!

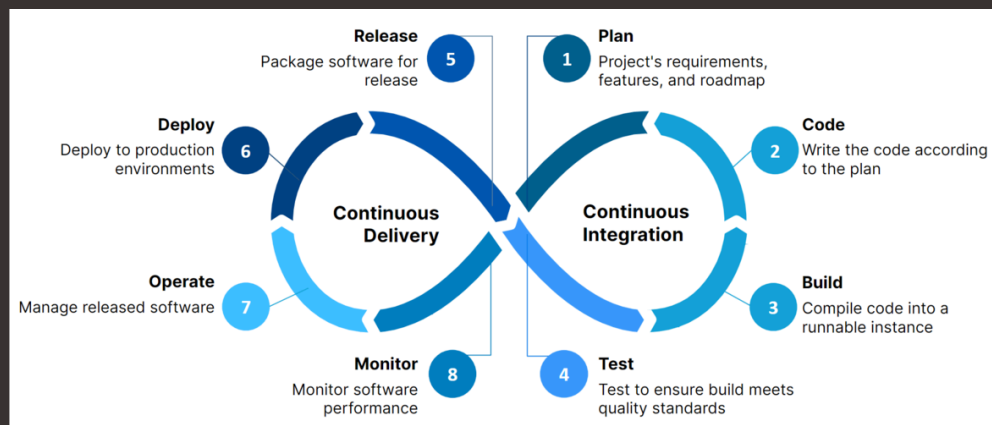

Ahmed Tetteh

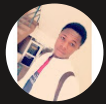

I'm building a CI/CD pipeline in 7 days

In this DevOps challenge, I'm learning about how to build a CI/CD pipeline. By the end of the 7 days, I will have built my own pipeline and automated the testing of a real application.

Hold me accountable!

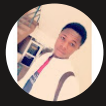

I will set aside 5hrs every day for a week to work on this challenge. I will keep myself accountable by reviewing the accomplishments of others who have been through the same journey. My reward for completing this DevOps challenge will be clap for myself and a nice yogurt.

What is DevOps?

DevOps is a set of practices that involves the development and operations team working together or a single individual to build, test, deploy and maintain a reliable application, while reducing the it's development lifecycle. DevOps engineers implement the DevOps practices in their organizations buy utilizing tools with can build automated pipelines, containerize and turn cloud infrastructure to code.

What is CI/CD?

CI/CD stands for Continuous Integration and Continuous Delivery/Deployment. This process helps teams by significantly reducing the manual work need in the application pipeline. Developers can automate the entire application development lifecycle whenever a change is made to the code, making it more efficient and reliable.
